SECTION 2: Terms of Reference

1. BACKGROUND

The Ministry of Natural Resources and Environment is the national focal institution responsible for invasive alien species (IAS) management in the country. With the rapid spread and increasing number of invasive plants and animals which pose high risks and potential impacts to local biodiversity, the Ministry of Natural Resources and Environment has developed Samoa's first National Invasive Species Action Plan 2008-2011 ("NISAP 2008-2011") and second NISSAP 2019-2024 that provide invasive species priority setting and to guide the implementation for more effective prevention, control and management of invasive species.

This assignment is to assess the status of the implementation including a much needed review and update of the NISSAP 2019-2024 action plan. The review will provide an up to date knowledge of the key priority species of significant concern and strategic programs to focus on for prevention, control, management including potential restoration and recovery activities and programs. The revised NISSAP will present an overarching framework to guide implementation and management of invasive species issues in the country. The current revision is expected to provide potential major gaps and list key recommendations including an up to date overview of the key invasive species priority setting and focus for the management of invasive species into the next 6 years of implementation.

The development of the NISSAP 2025-2030 is part of Samoa's national commitment and obligation that will support Article 8/h of the Convention on Biological Diversity (CBD) which stipulates: "Each contracting Party shall, as far as possible and as appropriate: Prevent the introduction of, control or eradicate those alien species which threaten ecosystems, habitats, or species. In addition,"The Aichi target made under the CBD also states that "By 2020, invasive alien species and pathways are identified and prioritized, priority species are controlled or eradicated and measures are in place to manage pathways to prevent their introduction and establishment." To implement this obligation, Samoa, as a Contracting Party of CBD was to set up a national strategy on invasive alien species (IAS) which led to the development of the first NISAP 2008-2011 and developing legislation to regulate introduction of new invasive species and perform necessary risk analysis to inform invasive species planning and focus of implementation to manage invasive species on the national level.

In light of this, the GEF-7 "Enhancing integrated sustainable management to safeguard Samoa's natural resources project" under the Division of Environment & Conservation and implemented in close partnership with the United Nations Development Programme (UNDP) is financially supporting the review of the existing NISSAP with lessons learnt which will inform the national management of Invasive species in the next 6 years.
